

Great Wall Fengjun 5 generator abnormal noise

What is a good noise level for a generator?

For instance, generators with a noise level of 70 decibels sound like they're operating next to you. In comparison, ones with 50 decibels are quiet enough to hold a conversation without raising your voice. It's important to note that for every increase of 10 decibels, the noise level is doubled or halved inversely.

What happens if a generator exceeds a noise limit?

Exceeding these limits can draw unwanted attention from neighbors or local law enforcement officers and cause complaints about excessive noise pollution. It's worth noting that a generator's age also plays a role in its overall sound production.

Why are generator noise levels important?

Generator noise levels are important to understand as they can impact the environment, nearby residents, and even your own health. Factors affecting generator noise levels include the type of generator, its age and maintenance history, and its distance from living areas.

How much power does a 2020 Fengjun 5 have?

There are 8 variants of 2020 Fengjun 5 pickup, including a total displacement of 2.4L and a total of 1 transmission options. The maximum engine power: 118.0kW, the maximum horsepower: 160PS, the maximum torque: 230.0N·m, the body length and width Height: 5095*1800*1730mm. Max.

What happens if a generator is too loud?

Continuous exposure to loud generators may lead to disputes with neighbors or penalties from local authorities if laws are violated. For instance, camping grounds or RV parks often have strict noise restrictions aimed at preserving the natural ambiance of the setting; violating these rules could result in expulsion from the site.

Where can I find sound performance data for generator sets?

Sound performance data for generator sets from Cummins Power Generation Inc. are available on the company's design software CD (called "Power Suite"). Sound performance data is also available in the Power Suite Library on the company's Web site:
