

What are mounting brackets & rails for solar panels?

Mounting Brackets are the primary components that attach the solar panels to the mounting surface. They come in various types depending on the mounting surface (roof,ground,pole,etc.). Rails: Rails are long, horizontal structures attached to the solar panels using clamps. They provide a stable base for the solar panels.

Why should you install a solar panel bracket?

The purpose of installing the bracket is to better fix the solar panel. If there is a more convenient and feasible method to fix the solar panel. PVMars will definitely recommend it to you, and effective solutions are based on solar panels' characteristics and your on-site installation environment.

How do you attach solar panels to a wooden frame?

You'll need clips or battens to attach solar modules to a wooden frame. As you can see, different materials come with different benefits and drawbacks. Which choice is right for you can depend greatly on your budget, environment, and where you want to mount the array. There are multiple options for mounting your solar panels.

Does pvmars install solar panels on a tin roof?

PVMars is a solar energy equipment supplier, and has installed 1MW of grid-connected solar systems for hospitals in Malaysia. Those solar panels are all installed on the tin roof. For more information about this case, click on the orange font. Metal roofs are uneven, so clamps are needed to fix guide rails.
