

# Installation of the pull rod behind the photovoltaic panel

Which direction should a photovoltaic module be installed?

When installing photovoltaic modules in the northern Hemisphere, the optimal installation direction of the module is to face south; When installing photovoltaic modules in the Southern Hemisphere, the optimal installation direction of the module is to face north. Serial connected PV modules should be installed in the same orientation and Angle.

How do I install a solar photovoltaic system?

Installing solar photovoltaic systems requires specialized skills and knowledge. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements.

How do PV panels work?

The simple design enables a "Build As You Go" installation method which is quick to install with minimal training required. The PV panels are attached with a pull/end clamp combination providing a robust and secure connection to the bucket. Pre-installed bolts on the racking determine the tilt and inter-row spacing.

How are PV panels attached?

The PV panels are attached with a pull/end clamp combination providing a robust and secure connection to the bucket. Pre-installed bolts on the racking determine the tilt and inter-row spacing. We clamp on all 4 sides of the long rail frame on the long in landscape orientation.

How a lightning protection system is installed on a solar PV farm?

Lightning protection systems which are installed on a solar PV farm are mostly based on a Franklin rod (connected to a down-conductor) as the preferred point of attachment. Consequently, it utilizes the concept of protective angle or rolling sphere method to determine the protective zone to the solar panel assemblies -.

Do solar panels need a grounding rod?

The answer depends on several factors, such as local regulations and the characteristics of the installation. In many installations, it is possible to connect the grounding of the solar panels to the house grounding rod. This can be convenient and economical, as it avoids the need to install an additional grounding rod.
