Can 4th graders use solar energy to power their classroom?

Take inspiration from these fourth graders and launch your own solar energy project using our Solar Classroom Lesson Plan resources. Last week we shared the story of Aaron's class -- a group of fourth grade students in Durham, North Carolina, who are using solar energy to power their classroom.

Can a classroom be powered by solar energy?

To power a classroom using solar energy, the total wattage of the solar panels must be greater than the combined wattage of all the electrical appliances.

How do you use a PV array in a classroom?

Place students in their groups and assign each group to a center. Explain the procedure and have the students complete the activity. PV cells can convert radiant energy directly into electricity. motors can convert electricity into motion. sunlight and artificial light are radiant energy. To learn about and monitor the PV arrays on the school.

How do you prepare a student for a solar oven experiment?

Have the students make solar ovens and cook food in them on a sunny day. Always wear safety glasses when performing experiments. Do not heat any substance or piece of equipment unless specifically instructed to do so. Be careful of loose clothing. Do not reach across or over a flame. Keep long hair pulled back and secured.
