In the realm of solar engineering, where precision and efficiency are paramount, the significance of accurate as-built drawings cannot be overstated.

How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m<sup>2</sup>/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp, avoiding shading between the rows of modules.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

How does pvcad auto-populate a template?

Instead of manually entering system data into the site plan, the array layout, the single-line diagram, and other documents, PVCAD auto-populates fields in the template. For example, PVCAD's IronRidge templates side cutouts of the IronRidge mounting system in the model space.
