How do you design a solar water pumping system?

When designing a solar pumping system, the designer must match the individual components together. A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1.

What are the components of a solar water pumping system?

A solar water pumping system consists of three major components: the solar array, pump controller and electric water pump (motor and pump) as shown in Figure 1. Note: Motor and pump are typically directly connected by one shaft and viewed as one unit, however occasionally belts or gears may be used to interconnect the two shafts.

What is a solar water pump circuit diagram?

Solar water pumps are great for those areas where there's plenty of sunlight, but no access to traditional electricity. They can be used to power wells, fountains, sprinklers, and more. A solar water pump circuit diagram will help you understand the various components and connections needed to make your system run smoothly.

What is solar water pumping system size?

Solar water pumping systems size depends on the system components such as PV solar system, pumping system, and storage system. The pumping system's performance can be predicted through system components design. Many models have been developed for sizing PV pumping systems prediction.

How to choose a solar water pumping system?

The type of solar water pumping system: borehole/well (submerged), floating or surface will depend on the water source. If the source is a borehole (proposed or existing) or deep well, then a submersible pump that fits the borehole or well should be selected. If the water source is a river, then a surface pump should usually be selected.

What is a solar water pump?

A solar water pump theoretically consists of three key components: a pump control system that may be just an on-off switch or may be a more complex electronic unit, a motor and the pump; however, in practice they are considered as one unit and generally called the "water pump" or in this guideline the "solar water pump".
