

Solar power generation system with electrical appliances

What is a solar generator & how does it work?

Solar generators convert sunlight into energy to power your devices and appliances when you don't have electricity, making them a perfect item to bring with you on a camping trip, or as a home backup system for running small appliances during a power outage.

What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

Can a solar generator power appliances?

If you want a solar generator that can power appliances whether it's at home, in your RV, offgrid or anywhere else, our top pick is the Bluetti AC200L. Are solar generators portable?

Solar generators are available as both portable generators and backup home generators. Most solar generators are portable, lightweight, and have a built-in handle. The best portable solar generators are used to provide power for construction sites, campers, events, or other settings where access to electricity is limited.

Can a solar generator power a house?

If you're looking to power your entire house on a backup generator system, solar may not be the way to go. You can easily recharge small electronics and operate certain appliances with a solar generator but don't expect to be able to keep your fridge, TV, and lighting systems all operational for very long.
