

# Where is the best place to install solar power

Where should solar panels be installed?

You won't have to do any calculations or worry about finding true south yourself - a solar installer will find the precise direction to point your panels in accordance with your property. The roof is the best place for solar panels because it receives the most uninterrupted sunlight throughout the day.

Where is the best place for solar panels?

The roof is the best place for solar panels because it receives the most uninterrupted sunlight throughout the day. If your roof doesn't face south, you're not out of luck. Some solutions for roofs without a southern face include: The only no-no is facing the panels north.

How to install solar panels?

Before installing solar panels, select a location where sunlight is available all day long. To get the ultimate result, face the solar panels to the south. So, sun, shade, and solar panel placement are significant factors for solar panel installation. The sun rises in the east and sets in the west.

Where are the ideal locations for solar panels?

The ideal location for solar panels is south-facing as they maximize the amount of sunlight they receive. The location of solar panels influences the energy production capacity of the system. Hop in as we give you the ideal locations for solar panels around the world.

Can solar panels be installed in your yard?

While the roof is often the go-to place to install solar panels because it sees the most sunlight, your yard can be almost as effective in some cases. For example, if you don't have a south-facing roof option, panels in your yard can easily be installed to face that direction.

Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?
