

Yingli 280 photovoltaic panel size

Are Yingli Solar PV modules fire resistant?

Yingli Solar PV Modules have a Class C fire resistance rating in accordance with the IEC 61730-2 certification. When PV modules are mounted on rooftops, the roof must have a fire resistant covering suitable for this application. PV modules are electrical generating devices that may affect the fire safety of a building.

What angle should Yingli solar panels be mounted?

Yingli Solar recommends that PV modules be mounted at a minimum tilt angle of 10 degrees to allow for proper self-cleaning from normal rain showers. Partial or complete shading of a PV module or modules can significantly reduce system performance.

Can Yingli Solar PV modules withstand snow?

Yingli Solar PV modules are designed to withstand high snow loads. However, if removing snow is desired to enhance production, use a brush to gently remove snow. Do not try to remove frozen snow or ice from PV modules. The dismantling of PV systems must be performed with the same care and safety precautions used during the initial installation.

Who is covered by the Yingli solar installation manual?

This manual applies to photovoltaic modules ("PV modules", also commonly known as solar panels) manufactured by Yingli Energy Development Company Limited ("Yingli Solar"), and is explicitly written for qualified professionals ("Installer" or "Installers"), including without limitation licensed electricians and RAL Certified PV Installers.

Can Yingli Solar PV modules be cleaned with a pressure washer?

Water with high mineral content may leave deposits on the glass surface and is not recommended. Yingli Solar PV modules may contain a hydrophobic anti-reflective coating on the glass surface to enhance power output and reduce dirt and dust buildup. In order to avoid module damage, do not clean PV modules with a power washer or pressure washer.

What size cable should Yingli Solar use?

Yingli Solar recommends installers use only sunlight resistant cables qualified for direct current (DC) wiring in PV systems. The minimum wire size should be 4mm². Cables should be fixed to the installation structure in such a way that mechanical damage of the cable and/or the module is avoided.
